

CALVING MATTRESS

The Calving Mattress also provides an ideal recovery facility for lame cows, outside the calving period. It is also commonly used for stock bulls particularly those indoors year round, providing much needed respite from slatted and solid concrete floors.

The Calving Mattress is 100mm with foam, however can be supplied with pasture mat and top cover, and upgraded later as circumstances allow.

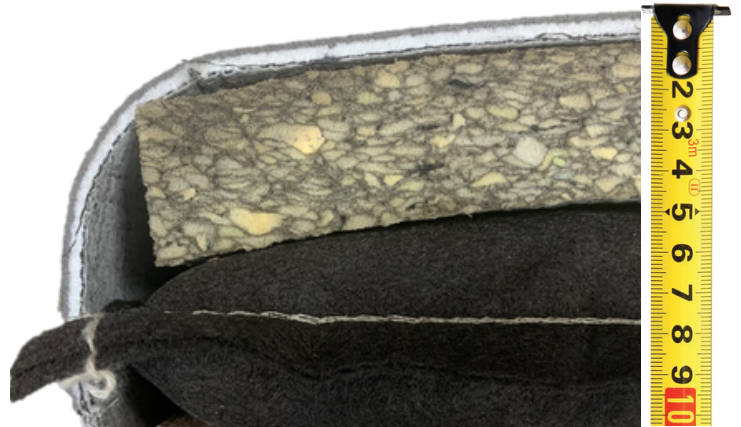

Pasture Mat offers:

- Thermal Comfort
- Stable footing
- Requires minimal bedding

Wilson Agri calving mattress is a triple layer, deep mattress consisting of a 6cm deep rubber crumb filled base, a central layer of 30cm foam, and waterproof top-cover.

The foam, rests on a rubber crumb filled under mattress, to allow better air circulation. It is covered with a top cover, which is waterproof, yet breathable, allowing the warm air from the cow's body to pass through the foam, softening it and cooling the cow.

- Pressure point body mapping reveals that Wilson Agri foam forms to the cow, relieving all pressure points while reducing hock sores.
- Pasture Mat flooring allows use of as little as 2 forkfuls of shavings per day yet provides cows with comfort equal to at least 6 inches of bedding.
- Super smooth cover reduces cleaning time by at least 50%!

10cm with foam, making it the deepest mattress available on the market

We offer a wide range of layout options to suit your needs
